

Now how long do I have to wait for the results?

Well, let's take a look.

Whoa!

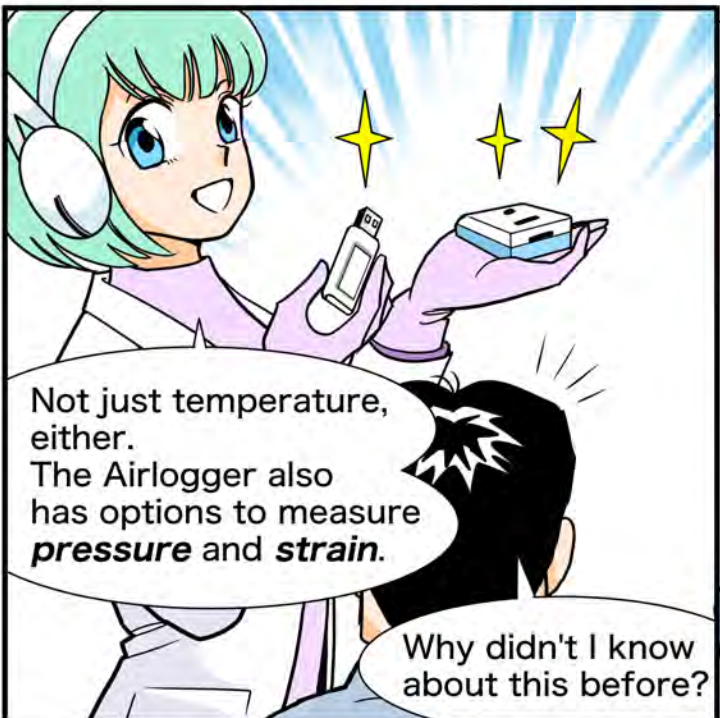

Whoa! It's graphing the temperature in *real time*!

Seriously?
This is *real time data*?

With *one* PC communication unit, you can simultaneously receive up to **100** real time data streams.

Now I'm impressed.

Not just temperature, either. The Airlogger also has options to measure *pressure* and *strain*.

Why didn't I know about this before?

I'd be so thrilled for *you* to check it out!
